- *Simple price and product maintenance*
- *Graphical table plan*

The Geller-Labware Food & Beverage System – a completely new dimension in technology at the hospitality point of sale

Simply the best there is

The Giga Hospitality Terminal is the latest model in a range of point of sale terminals that has led the Italian market for more than ten years. Highly sophisticated, yet simple to use, Giga has all the hospitality features you could want in a rugged, good-looking housing that enhances the ambience of any location.

Right for you – no compromises

Fine dining, casual dining, pubs, nightclubs, pizzerias, fast food, take away and deliveries - whatever your sector of hospitality, Giga will be delivered with the right functions and screen layouts to meet your specific business requirements.

A picture is worth a thousand words

The colourful 3D pictures of menu items guide even part time and new servers through each transaction, enabling them to place orders quickly and accurately.

Choose the options that suit you

To increase efficiency and simplify daily operation, the system offers features specific to different sectors of hospitality.

Your dealer will help you choose the options that apply to your hospitality sector.

Control costs and maximise profits

There are 2 powerful but easy to use back office software options that provide the essential data to enable management to make smart business decisions.

With BackOffice Lite installed on your PC, you can change product and waiter names, prices and settings and obtain sales and management information.

Authorised Sales and Service Dealer

BackOffice Pro includes inventory control, purchasing control, menu costing, recipe costing, employee time keeping, accounts receivable and sales tracking.

BackOffice Lite and BackOffice Pro are both web based so that you can manage your system from head office or from home.

The handheld connection

Handheld Nano waiter terminals can be integrated with your Giga terminals.

Sending orders directly from table to kitchen and bar enables you to provide better service with less effort and fewer servers.

9 mm thick and weighing 115 grams, Nano is the world's thinnest, lightest handheld terminal. Bluetooth® range is 250m in each direction.

Now or later

You can add handheld capability to your Giga system at any time. Just plug in an access point and switch on the Nano. It will seek and find the Giga terminal, acquire all the necessary data and be ready to use in under a minute.
